

Slide Projector

Use with Kindergartners in Nature, Session 4.

Supplies: *Mission Friends Leader Kit* item 20, "Cody Slide Show"; lidded shoebox; utility knife

1. Cut a 1-inch square opening at one end of the box. This will be the viewing opening.
2. Cut a 2-inch square opening in the top of the lid about two inches from the opposite end of the box. This opening will provide light for the slide show.
3. On the same end, cut a 4-inch slit on the top and bottom of the box, about 1-inch from the end of the box. These two slots will allow the slide show strip to be passed vertically through the box for kindergartners to view.
4. Follow kit directions to prepare kit item 20, "Cody Slide Show."
5. Slip the slide strip through one slot, through the box, and out the other side, with photos facing the 1-inch square viewing opening. To view the slide show, gently pull the slide strip through the box while looking in the viewing opening.
